SOURCE EVALUATIONS ARE DEFINITIVE APPRAISAL OF CONTENT IS TENTATIVE

1. The large factory of CKD Stalingrad National Enterprise, located in Prague-Vysocany, which makes important materials for national defense, is supplied with power by two high-tension lines which end at a transformer station.
2. This station is located, as is indicated on the attached sketch, against the slope of the hill which borders the factory to the north, beyond the railroad track. One of these slopes also provides a natural anti-aircraft defense position.
3. The transformer station is about 700 meters from the passage of the road under the railroad track.
4. This is one of the sensitive points of the plant. An observation post on the factory building facing the transformer station assures a close watch.
